Nestlé – Data Warehouse

Case Study

One pager

Transforming Data Management for a Global FMCG Leader with a Centralized Data Warehouse and Intelligent Data Processing Across Key European & Asian Markets

Problem Statement	Solution Overview	Application UI	Business Value Achieved
Delays in decision-making Limited market visibility Manual & siloed processes Inefficient data integration	Robust & Scalable Architecture Built a centralized Azure-based data warehouse with automated ingestion, real-time streaming, and strong governance using Microsoft Fabric & Synapse. Application UI Developed a Power BI embedded web portal with self-service dashboards and drill-down reporting for regional business teams. Solution Proposed by Ganit Unified Azure-based DWH with Microsoft Fabric Comprehensive governance via Microsoft Purview	<pre>graph TD; A[Sources: SAP / Excel / SQL] --> B[Azure Data Factory (Ingest)]; B --> C[ADLS Gen2 (Bronze / Silver)]; C --> D[Azure Synapse Analytics]; D --> E[Power BI Embedded Portal];</pre>	- Single source of truth for faster strategic decisions - Strong governance ensuring data accuracy & compliance - Migrated 3 TB of historical data + daily incremental loads - Processing time cut from 28 hours to under 2 hours - Self-service Power BI dashboards reducing IT dependency - Improved analytics adoption across 6 regional markets Azure Services Used Azure Data Factory ADLS Gen2 Synapse Analytics Azure Event Hubs Microsoft Fabric Microsoft Purview Azure AD

A global FMCG leader operating across Europe & Asia needed a unified data platform to consolidate regional data (UK, Germany, France, India, China, Indonesia) and enable near-real-time analytics. Legacy systems lacked scalability, automation, and cross-regional data visibility.

Three pager

Ganit delivered a unified Azure data platform for Nestlé, driving faster insights, governance, and efficiency across key European & Asian markets

Outcome

Delivered a cloud-native centralized data warehouse on Microsoft Azure integrating SAP, SQL, and Excel data sources, enabling near-real-time analytics, automated data ingestion via Azure Data Factory, and governed access across 6 regional markets through Microsoft Purview.

Operational Efficiency

Unified multi-country data into Synapse Analytics, eliminating silos and manual processing through Azure Data Factory pipelines and Event Hubs streaming.

Cost Optimization

Implemented ADLS Gen2 lifecycle policies and Synapse serverless pools, achieving up to 94% cost savings on storage and on-demand query execution.

Scalability & Reliability

Built a scalable lakehouse on ADLS Gen2 and Synapse with Event Hubs ingestion and Azure AD-based governance, handling 3+ TB of historical data.

Business Growth

Enabled self-service Power BI dashboards embedded in a web portal, boosting analytics adoption and accelerating regional decisions across 6 markets.

Legacy regional data systems hindered timely decisions and unified visibility across European & Asian markets

Problem Statement

A global FMCG enterprise operating across 6 markets (UK, Germany, France, India, China, Indonesia) needed a unified data platform to consolidate regional data, streamline reporting, and enable near-real-time analytics.

Their legacy data setup lacked scalability, timely accessibility, and automation — creating bottlenecks in decision-making, inventory forecasting, and promotional effectiveness tracking.

Problem 1

Delays in decision-making due to fragmented regional data

Problem 2

Manual processes slowing data refresh cycles and analysis

Problem 3

Limited sales & promo visibility across markets

Problem 4

Inefficient data integration from SAP, Excel & SQL systems

Ganit built a unified Azure-based data warehouse with automated ingestion, intelligent orchestration, and strong governance

Solution Overview

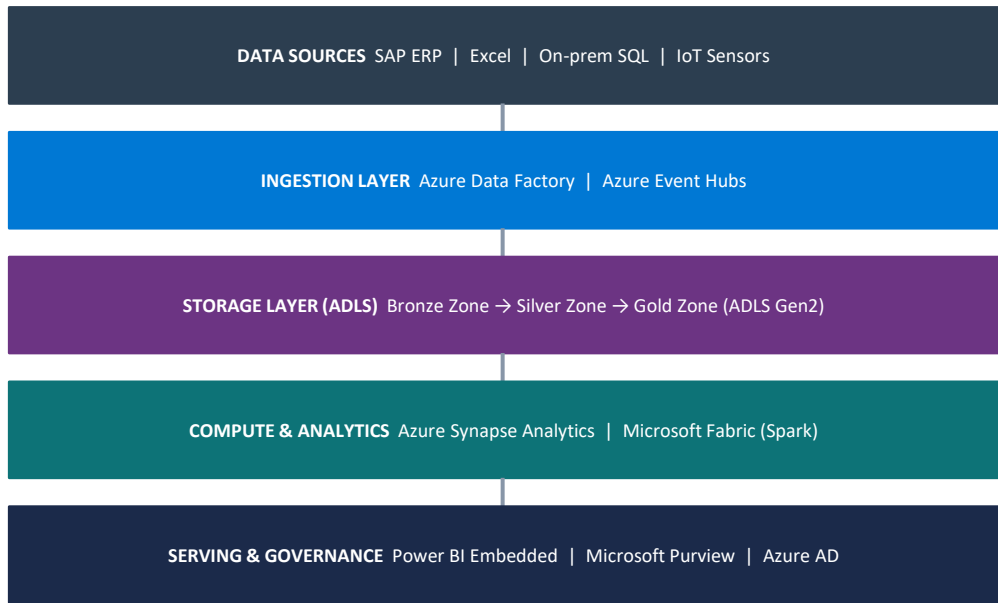

Robust & Scalable Architecture

- Built a centralized data warehouse on Azure Synapse Analytics and ADLS Gen2, integrating SAP, SQL, and Excel data sources.
- Enabled automated ingestion through Azure Data Factory with Event Hubs for real-time streaming data availability.
- Implemented governance and access using Microsoft Purview and Azure AD for data security and compliance.

Application UI

Developed a Power BI embedded web portal with self-service dashboards, enabling regional teams to generate on-demand reports and perform ad-hoc analysis without IT dependency.

Data Architecture

Thank You

Ganit provides cutting edge solutions at the intersection of hypotheses-based analytics, ML-driven AI, and new-data insights from smart devices

We have delivered tangible benefits to leading brands in North America, Europe, MENA and APAC
