

Ganit Business Solutions

Corporate Profile, Capabilities & Credentials

Company Snapshot

Ganit Business Solutions is a specialized data, analytics, AI, and cloud transformation consulting organization. The company supports enterprises in modernizing data ecosystems, building analytics capabilities, enabling self-service BI, implementing governance frameworks, and accelerating AI adoption. Ganit has approximately 250 employees and delivery presence across Bengaluru, Chennai, and Mumbai.

Core Service Lines

- Data Engineering & Modern Data Platforms
- Business Intelligence & Reporting
- Cloud Data Platform Modernization
- Data Governance & Compliance
- Artificial Intelligence & Machine Learning
- Generative AI Solutions
- Advanced Analytics & Forecasting

Cloud & Platform Expertise

Microsoft Azure: Azure Data Factory, Synapse Analytics, Databricks, ADLS Gen2, Microsoft Fabric, Purview, Event Hubs, Key Vault.

AWS: Amazon S3, AWS Glue, Redshift, Athena, EMR, Lambda, Lake Formation, QuickSight.

Databricks: Lakehouse Architecture, Delta Lake, Streaming Data Processing, Enterprise Analytics, ML Enablement.

Professional Certifications

Representative expertise areas include AWS Certified Solutions Architect, AWS Certified Data Engineer, Microsoft Certified Azure Data Engineer Associate, Azure Solutions Architect Expert, Databricks Data Engineer Associate, Databricks Data Engineer Professional, and related cloud, analytics, and data engineering certifications.

Industry Experience

Consumer Goods (FMCG), Pharmaceutical & Life Sciences, Banking & Financial Services, Manufacturing, Retail & E-Commerce, Healthcare, Logistics & Supply Chain, Technology, Telecommunications, and Utilities.

Typical Business Problems Addressed

Fragmented enterprise data, inconsistent KPI definitions, manual reporting, lack of governance, poor supply chain visibility, siloed customer data, regulatory reporting challenges, cloud modernization, and enterprise AI readiness.

Delivery Methodology

Phase 1: Discovery & Assessment

Stakeholder workshops, current-state assessment, data landscape analysis, and business requirements gathering.

Phase 2: Architecture & Design

Target-state architecture, security model, governance framework, and integration strategy.

Phase 3: Build & Modernization

Data platform implementation, pipeline development, semantic models, dashboards, testing, and deployment.

Phase 4: Adoption & Scale

User enablement, governance rollout, monitoring, optimization, and continuous improvement.

Delivery Models

Advisory & Strategy, Fixed-Scope Implementations, Managed Analytics Services, Dedicated Delivery Pods, Staff Augmentation, and Build-Operate-Transfer (BOT) models.

Typical Enterprise Team Structure

Engagement Manager, Solution Architect, Data Architect, Data Engineers, BI Developers, Business Analysts, Data Governance Specialists, QA Engineers, Cloud Specialists, and AI/ML Engineers.

Representative Engagement Themes

Enterprise Data Platforms, Customer 360 Solutions, Commercial Analytics, Trade Promotion Analytics, Demand Forecasting, Supply Chain Visibility, Regulatory Reporting Automation, Governance Programs, Self-Service Analytics, and AI Enablement.

Why Organizations Choose Ganit

- End-to-end capabilities spanning strategy, engineering, analytics, governance, and AI.
- Strong expertise in cloud-native modernization across Azure and AWS ecosystems.
- Ability to integrate complex enterprise application landscapes.
- Experience across commercial, supply chain, finance, manufacturing, and regulatory domains.
- Outcome-focused delivery with emphasis on business value realization.
- Scalable delivery model supporting both targeted initiatives and enterprise transformation programs.
